

**Leading the Convergence of Public Safety Technology:
Positron Public Safety Systems Announces First Ever Integrated Desktop**

June 11, 2007, Montreal, New York

Positron Public Safety Systems, a leading provider of public safety communications solutions announced today the unveiling of its premiere product offering: the industry's first fully integrated desktop. For the first time, public safety professionals will have access to everything they need to handle the entire workflow of the emergency response organization --- 9-1-1 call-handling, geographic location display, computer aided dispatch, radio communications and records management --- from one source and on a single screen. The new desktop will be unveiled in Charlotte, North Carolina at the NENA Annual 9-1-1 Conference & Trade Show.

Positron Public Safety Systems is revolutionizing the way public safety organizations do business. This convergence of technology will enable customers to work with a single vendor for all their communications needs, rather than having to manage multiple vendors and loosely-coupled applications. This enables emergency responders to serve their constituents more efficiently and effectively. Performance is optimized through better data sharing and workflow automation. Customers have a single point of contact from sourcing through to maintenance and support.

Doug Roberts, Vice President and General Manager, Positron Public Safety Systems, said, "Positron's convergence of technology and single point of contact concept sets a new standard paradigm for operations in public safety, and we're proud to be leading this evolution. Positron Public Safety System offers the only true native system design capability that covers emergency response from start to finish. This will help emergency responders do their jobs better, faster and more efficiently."

About Positron Public Safety Systems

Positron Public Safety Systems, a division of IPC, is a leader in fully integrated, end-to-end public safety solutions for call handling and dispatching. Established in 1970, Positron has more than 36 years' experience delivering mission-critical applications and over 23 years of developing public safety solutions. With more than 300 employees in offices throughout the world, Positron's global footprint extends from the United States and Canada through Europe, Africa, Latin America, Australia, Asia and the South Pacific. Statements made in this news release that state IPC's or its management's intentions, beliefs, expectations, or predictions for the future constitute "forward looking statements" as defined by federal securities laws, which involve significant risks and uncertainties. Many risks and uncertainties are inherent in the telecommunications equipment industry. Others are more specific to our operations. The occurrence of the events described and the achievement of the expected results depend on many factors, some or all of which are not predictable or within our control. Actual results may differ materially from results discussed in these forward looking statements. Among the factors that could cause actual results, performance or achievement to differ materially from those described or implied in the forward-looking statements, are risks associated with substantial indebtedness, leverage and debt service, risks relating to the performance of our business and future operating results, risks of competition in our existing and future markets, loss or retirement of key executives, risks related to the notes and to high yield securities generally, general business and economic conditions, market acceptance issues, including potential technology changes and the risks inherent in new product and service introductions and the entry into new geographic markets, as well as those risk factors described in our filings with the SEC.
